

November 10, 2015

Dear HFS IRIS Clients:

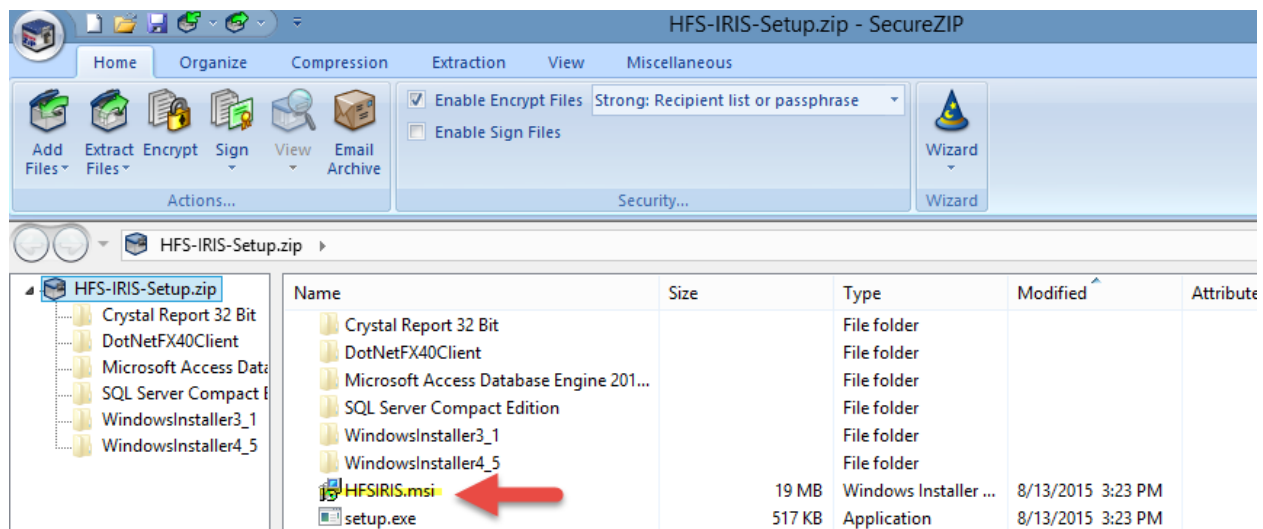

We recently posted a new update for the IRIS SQL system. The change is summarized below.

IRIS, version 5.0.3.07:

- D11436 - IRIS - Fixed an issue where a change to the M record - FMG Grad Date or residency code was being retained but not exported to the dbf files.

The example that this occurred is where an export was attempted but there was a fatal error where the FMG Cert Date was before the Med School Grad date. The user went in and changed the date and was saved. It then was able to be exported but when the user did an import – preview (as a test to see if import passed prior to submission to MAC), it failed because what we wrote out to the M dbf file was the original FMG Cert Date and not the revised one. This has been fixed in the D11436.

You will need to go to our website www.hfssoft.com and go to the download page. You may be asked to log in. You will want to select the IRIS link to download. If you have already installed the IRIS software, when you retrieve the download, you will see the following inside the zipped file (ignore the dates below); you will only need to run the HFSIRIS.msi. If you have not installed the system yet, then run the setup.exe.

We are working on updating the system to retrieve updates directly thru the system using Help – Check for Updates like we have in the cost reporting software.

A copy of the IRIS User Guide is located at the following link:

<https://www.hfssoft.com/doc/HFS%20IRIS%20SQL%20User%20Guide.pdf>

If you have any questions or problems with the above, please let me know.

Thanks,

Luke DiSabato
