

September 24, 2015

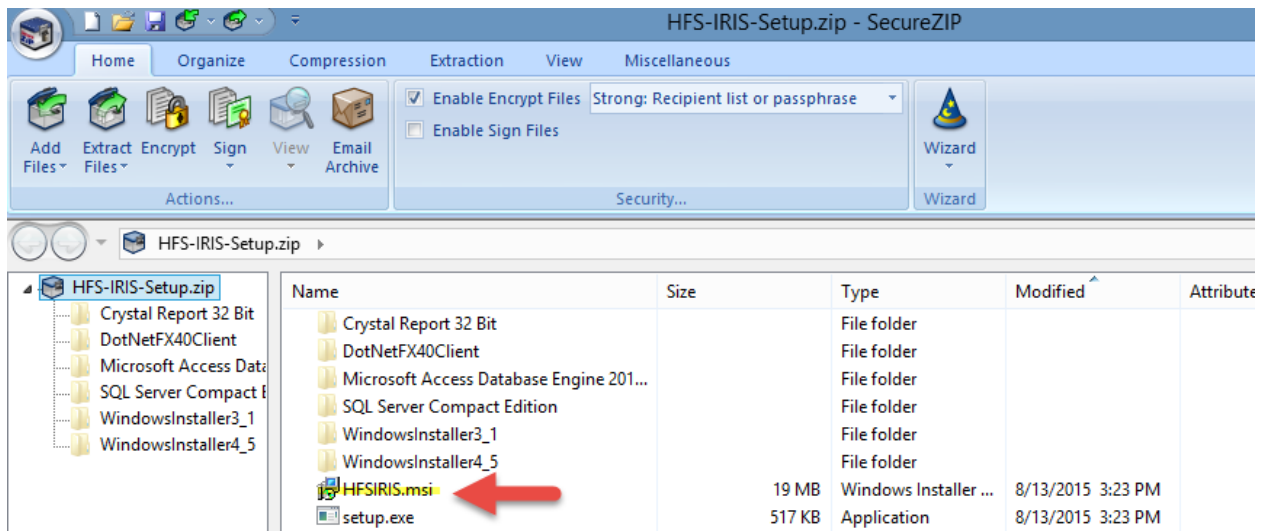

Dear HFS IRIS Clients:

We recently posted a new update for the IRIS SQL system. The changes are summarized below.

IRIS, version 5.0.2.00:

- D11025 - IRIS - Corrected the SSN validation at assignment entry when the "Turn on SSN Masking" is selected in the Preference area.
- D11026 - IRIS - Set up an edit to no longer allow an "-" in the provider number when entering in the FIR and during assignment entry.
- D11027 – IRIS - Corrected an issue where IRIS would stop working when entering in an assignment.
- D11028 – IRIS - Fixed the sorting capability for the Residence report to sort by Name.
- D11029 – IRIS - Added the capability to select multiple Residency Codes when running the Residency report.
- D11085 – IRIS - Added an edit error message on import when the M or A file has headers that are not conforming to CMS guidelines.
- D11086 – IRIS - Corrected an import issue with the A records not being completely imported as there was a record count issue with the M record.

You will need to go to our website www.hfssoft.com and go to the download page. You may be asked to log in. You will want to select the IRIS link to download. If you have already installed the IRIS software, when you retrieve the download, you will see the following inside the zipped file (ignore the dates below); you will only need to run the HFSIRIS.msi. If you have not installed the system yet, then run the setup.exe.

We are working on updating the system to retrieve updates directly thru the system using Help – Check for Updates like we have in the cost reporting software.

If you have any questions or problems with the above, please let me know.

Thanks,
Luke DiSabato
