

January 29, 2016

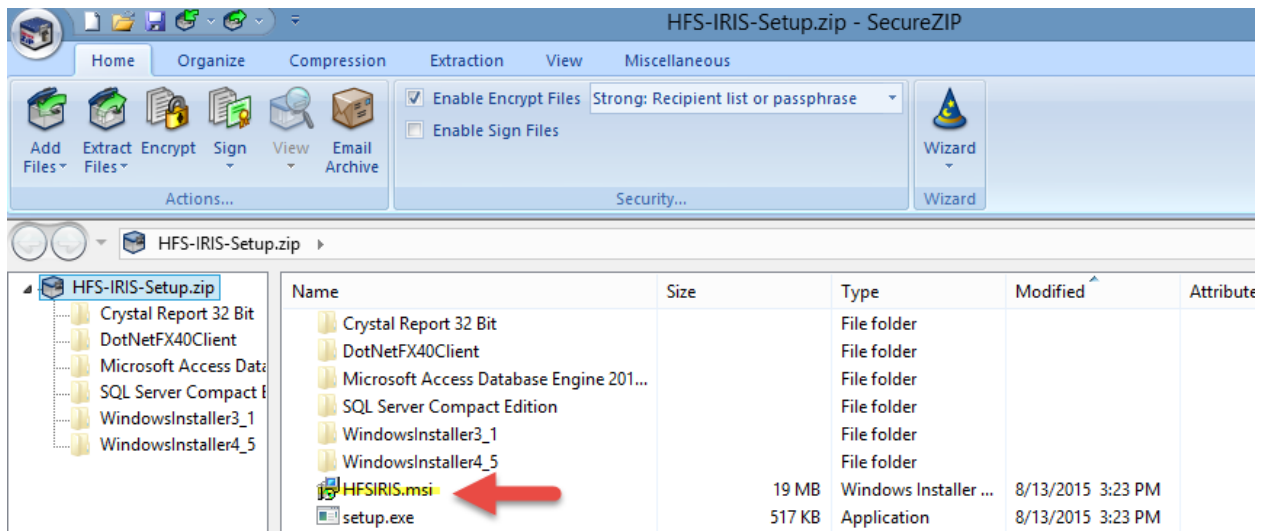

Dear HFS IRIS Clients:

We recently posted a new update for the IRIS SQL system. The changes are summarized below.

IRIS, version 5.2.0.0:

- D10797 – IRIS - Added the Check for Updates feature. The software will launch a MCRIF32 updater and will correspond to the server to determine if an update is available. Once updated, the user can push out the update through NetSync.
- D11955 – IRIS - Added ability to delete duplicate Master Records that are associated with the same Fiscal Year. This allows the user to export files to an M & A dbf for submission to CMS.
- D11956 – IRIS - Corrected the GME weight for certain assignments that were previously changed. These were not being detected with the previous update.
- D11957 – IRIS - Corrected the way the Overlap report works. We added a check box near the heading that will select and deselect all providers identified as overlaps. We also corrected the output of the report to identify only these residents and providers selected.
- D11966 – IRIS - When user first opens the program, all existing Isolated Storage preference will be saved to the registry. This will only happen once. Then from that point on, all preferences will look in the user registry. New Location will be the following: HKEY_CURRENT_USER\Software\Health Financial Systems\IRISSetup\UserSettings\.
- D11995 – IRIS - Made changes to the OIG exclusion file import to accommodate a csv file as this is the change that OIG is moving to beginning in February 2016.
- D12016 – IRIS - Changed the naming of the Master Variance report to include the provider's FYE, previously was using the date created.

You will need to go to our website www.hfssoft.com and go to the download page. You may be asked to log in. You will want to select the IRIS link to download. If you have already installed the IRIS software, when you retrieve the download, you will see the following inside the zipped file (ignore the dates below); you will only need to run the HFSIRIS.msi. If you have not installed the system yet, then run the setup.exe.

This release does include our new Check for Updates like we have in the cost reporting software. This will work for the next release as the publishing of this requires you to retrieve the updates from the website.

A copy of the IRIS User Guide is located at the following link:

<https://www.hfssoft.com/doc/HFS%20IRIS%20SQL%20User%20Guide.pdf>

If you have any questions or problems with the above, please let me know.

Thanks,
Luke DiSabato
